Adapter Reduction

Code: AL-268 GST: 18% Brand: AVAIN LABS

AVAIN LABS® Adapter Reduction

The AVAIN LABS® Adapter Reduction is a high-quality laboratory glass adapter designed for connecting glassware with non-similar joint sizes in scientific, research, and industrial laboratory applications. This precision-engineered adapter features a larger lower joint and a smaller outer joint, enabling secure and leak-proof connections between glass apparatus of different standard joint sizes.

Manufactured from premium laboratory-grade glass, the adapter ensures excellent chemical resistance, thermal stability, and durability, making it suitable for a wide range of distillation, reflux, extraction, and analytical procedures. The adapter is produced in compliance with DIN 12257 standards, ensuring dimensional accuracy and compatibility with standard laboratory glassware. ASTM E-676 compliant versions are also available upon request.

Key Features:

- Premium AVAIN LABS® Adapter Reduction
- Designed for connecting glassware with different joint sizes
- Lower Joint: Larger Size
- Outer Joint: Smaller Size
- Manufactured from high-quality laboratory glass
- Excellent chemical and heat resistance
- Precision-ground joints for secure, leak-proof connections
- Produced according to DIN 12257 standards
- ASTM E-676 standards available upon request
- Durable and reusable laboratory accessory
- Suitable for research, educational, pharmaceutical, and industrial laboratories

Applications:

Ideal for use in distillation assemblies, reflux systems, chemical synthesis setups, extraction processes, analytical laboratories, research applications, and scientific glassware connections where different joint sizes must be interconnected.

Why Choose AVAIN LABS® Adapter Reduction?

- Ensures reliable connections between non-matching glass joints
- Precision-manufactured for superior fit and performance
- Complies with international laboratory glassware standards
- High durability and chemical resistance
- Trusted AVAIN LABS® quality for laboratory and research applications
